**Parsing a MARC XML record set** ..... 1

# Parsing a MARC XML record set

1. Login to the NNELS website
2. Go to the MARC XML record set that you just uploaded (navigate to MARC XML Record Sets in the NNELS Admin drop-down menu)
3. Click Generate new stub Repository Records
4. Select all records by checking the first checkbox
5. Click on the first operation: 1. Parse MARC XML
6. Ignore the other operations
7. Click on the Edit tab on the page menu (next to View)
8. Change the Status to Complete (parsed)

Now each book record is in NNELS. We just need to connect these records to their files, which are stored in S3 (aka "DragonDisk"). Move on to [Creating a S3 record set](#).
